

# CosmoSlide

Cat. No. MET20102

- Size  
75×25×11mm
- Weight  
6.3g

The **CosmoSlide** is a specially designed slide featuring a unique coating that enables precise separation and collection of tissue samples upon IR laser exposure without causing sample damage.

It is compatible with various sample types, including FF and FFPE, and integrates seamlessly with the CosmoSort device to ensure high precision and efficiency in biological analyses. It also supports various stained samples, including H&E, IF, IHC, and FISH

## Features

### 1. Integration with CosmoSort Device

CosmoSlide is optimized for seamless integration with the CosmoSort device, ensuring high precision and efficacy.

### 2. Wide Sample Compatibility

CosmoSlide provides excellent performance with FF and FFPE samples and supports various staining methods, including H&E, IF, IHC, and FISH. It maintains compatibility with standard slides and follows the same sample preparation protocols.

### 3. Special Coating Technology

Equipped with a special coating, the selected sample regions can be precisely separated upon IR laser exposure without causing sample damage. This feature enables accurate and efficient tissue sample collection.

01

#### CosmoSlide: A Specialized Coated Slide for Precise Tissue Collection

Biospecimen is prepared on the discharging layer-coated glass.

02

#### Laser Activation for Gentle, Damage-Free Sample Collection

When a pulsed IR laser is applied to the target, the specialized CosmoSlide coating facilitates precise separation without damaging the tissue. This allows the selected sample region to be efficiently collected.

03

#### Optimized for Seamless Collection and Analysis

CosmoSlide ensures smooth sample transfer, maintaining spatial integrity for downstream analysis. Its standardized format allows compatibility with existing laboratory workflows.

This product is optimized for experiments using the CosmoSort device and is recommended for use with this equipment.
